Professional and pragmatic optimisation of operational processes in the process industry

Organization:

Dekker & van Oosterhout B.V. is a young and dynamic organization that provides consultancy services and products within the ERP domain using Oracle E-Business Suite (EBS) and Oracle JDE Enterprise One applications. We specialise in extensive support for optimisation of operational processes of organisations in the (semi) process industry.

Knowledge and ability:

Our organisation disposes of specialists that manage to combine especially logistics knowledge and experience with functional & technical application expertise. This makes our employees excellent sparring partners to evaluate your operational processes and to assess the options for providing optimal support through information systems.

Techniques:

- Enterprise Resource Planning (ERP) applications:
 - Financial Management
 - Inventory Management
 - Purchase Management
 - Order Management
 - Production Management
 - Formula and Recipe Management
 - Process Engineering Management
 - Quality Management
- ISA-95 batch management integration with control domain (MES, SCADA)
- Integration with Warehouse Management and Production Scheduling
- Integration with Auto-ID (Barcode and RFID)

Processes:

- Batch processes
- Continuous processes
- Discrete processes

Surroundings:

- Pharmaceuticals (GMP and GLP)
- Food (processing)
- Beverage
- Chemicals
- Automotive
