KSE, proven process technology

Organization

KSE is a multidisciplinary company with a workforce of around 150. We focus on the mechanization and automation of processing systems, with specializing in the dosing, weighing, mixing, conveyance and storage of fine components. These range from powders, granulates and liquids to finished products.

In addition to supplying products, we are involved in project execution. A project may comprise anything from the extension of an existing system to the turnkey delivery of an entirely new factory.

Companies

The roots of KSE can be found in the southern part of the Netherlands, in an area called De Kempen. Kempenservice Elektrotechniek BV was founded in 1973 as a firm of electrical engineers, serving local customers in the green houses, stables and animal feed manufacturers.

The integration of Alfa Doseer- en Weegsystemen BV to KSE on 1 January 1997 was increasing the international operations of KSE. In its 67-year history Alfa, a specialist in the field of weighing and dosing systems, has acquired a reputation for its ideal solutions for the accurate weighing and dosing of dry matter.

Based on a solid know-how and long-termed experience, in 1999 Rijkers International (formerly Rijkers Staalbouw Uden) was taken over in order to increase the company activities in different branches. [Rijkers BV](#) is specialized in food, compound, special chemicals and water & waste-water treatment, focusing on the processes of storage, conveyance, weighing and dosing, and liquid handling.

Established in 1898, [J. van den Berg & Zn. Waddinxveen BV](#) is a company with a long termed experience in mill building. Later on J. van den Berg & Zn. Waddinxveen BV acquired a track-record in engineering and erecting installations on a turn-key base in the field of amongst others premix, food and construction materials. In January 2001, the company and its workforce of around 60 became a member of the KSE Group. The group thereby increased know-how in mixing processes in the field of powder technology, but also in all aspects of product processing like crushing, milling, sieving, dosing, storage of raw materials and mechanical and pneumatic internal transport systems.

On 15 September 2004 Kempenservice elektrotechniek BV & Alfra Doseer- & Weegsystemen BV are grouped in KSE Protech BV. Specializing in animal feed industry and related industries has resulted in the name KSE Protech, which stands for all the international KSE firms that execute automation projects in the field of Process Technology.

By integrating the solid know-how and long-termed experience of all companies mentioned, including a wide range of technology and a number of markets, and combining it with the service network, KSE has developed into a multidisciplinary company. A company that can supply worldwide with a complete range of single products and services up to turn-key projects for the processing powders, granulates and liquids.

Projects

Many of the projects involve turnkey supply of complete installation, including factory buildings. These are undertaken in close co-operation with client, architect and subcontractors. A motivated team of design and project-engineers, production and installation personnel ensures the perfect balance between client's wishes and realization of the order. Co-ordination and final responsibility for such projects remain with KSE.

Products

You can classify the products of KSE into 3 product groups. Look at the product group icons below.

Dosing and weighing systems

Mixing technology and machines
